IRIS FLOWER CLASSIFICATION USING ARTIFICIAL INTELLIGENCE

Name: Somarouthu Devi Sathwika

Intern ID: CITS1935

Project Title: Iris Flower Classification using Artificial Intelligence

Objective: The objective of this project is to classify iris flowers into different species using Artificial Intelligence and Machine Learning techniques.

Tools and Technologies:

- Python
- Google Colab
- Scikit-learn
- Pandas
- NumPy

Dataset: The Iris dataset was used for this project. It contains flower measurements such as sepal length, sepal width, petal length, and petal width.

Methodology:

1. Loaded the Iris dataset.
2. Split the dataset into training and testing data.
3. Trained a Random Forest Classifier model.
4. Predicted flower species using the trained model.
5. Evaluated the model accuracy.

Result: The model achieved 100% accuracy on the test data and successfully predicted the flower species as Setosa.

Conclusion: This project demonstrates how Artificial Intelligence can be used to classify flowers based on their characteristics. The model performed successfully and produced accurate predictions.
